Providence Gold Mines Inc. (TSX-V: PHD) (“the Company”) is pleased to announce an update to NR dated June 27, 2019. Drill hole PM19-05 and surrounding area was recently excavated at surface and uncovered the vein and zone which was then systematically chip sampled by continuous channel samples every 0.5 meter along strike for a total distance of 7.5 meters. The vein remains open along strike in both directions and the channel assay results are presented in table 1 below.

Table 1

Planning is now underway to excavate the thin layer of overburden and examine the exposure to determine the true thickness of the zone.

Geological Map

Further drilling of the zone is now planned as part of the upcoming 2,900m drill program which can be reviewed at www.providencegold.com
